Start writing!

How globalized/ connected are we really?

Final project presentation

Spiced Academy Data Science Bootcamp

Spearmint Vector Machine Cohorte

2 November, 2020

Motivation

At the beginning of the year: fires in Australia

^ During the lockdown: in Germany corona cases from Western Europe and China and US but not Eastern Europe

^ The news seem to be really biased

^ And if you do not actively try to be a "global citizen" and search for international news, you get stuck in your local/national bubble

^ This is dangerous, especially in the face of climate change (we need to care about all humans/ all creatures on earth and not only about our immediate surroundings?

Maybe then people would not go on the street in Berlin to demonstrate against wearing a mask in the supermarket if they understood how severe the situation is elsewhere?

Data source

Using the API from different news ...?

Problem: not all countries are represented (especially Africa and Asia are missing)

But good for a start to test my pipeline

at the end:

Get data from twitter tweets:

Is it used everywhere around the globe?

Not sure

But at least everyone can use it and probably the big newspapers of many countries use it

I am geographer and love to make maps!

That is why my visualisation goal was to make a flow map

[fit] ⌘+C ⌘+V = 🙌

Data pipeline

Here an image

^ speaker notes

What was interesting to learn?

- setting up a whole pipeline on my own
- the content result of the project
- creating flow maps 🥰
